

.Net Developer assignment (Crystal Mind Task)

Step5: Create Simple Page For Customer List Report.

- In first we create the database and make the migration and handling the relation between the 2 tables (Customer - Address).
- After creating 2 classes we used the repository design pattern to creating the CRUD operation that we can create , read , update and delete any data to our tables.
- And we use unit of work design pattern coordinate the operations that work of multiple repositories.
- We create Result View Model to Consolidation of the response to the result and use it in the 2 controllers .
- Then we also want to create Api controller and use the CRUD operation with it to make our logic with our methods
- Then we make our validation in this methods .
- We can test it in swagger.
